Education

The University of Auckland

Feb 2023 – Nov 2026

Bachelor of Engineering (Honours) – Software Engineering

- 8.3 / 9.0 GPA (A / A+ average)
- Dean's Honours List 2024

Work Experience

Visa

Nov 2025 – Feb 2026

Software Engineer Intern

- Reduced cross-environment test-execution times by **70%** by developing automated UI Playwright tests as well as automated API tests in **C#** within an **agile** team, ensuring saved time for testers.
- Leveraged AI and Playwright MCP to generate natural no-code automated smoke tests, reducing manual testing efforts and allowing easier access to testing.
- Implemented **GitHub Actions** workflows to schedule automated tests, ensuring new code did not break existing features and reducing bugs sent to production.

Spotyaa

Dec 2024 – Oct 2025

Software Engineer Intern

- Collaborated on developing a new Spotyaa website by creating frontend components with React, working closely with a team of interns in an agile environment.
- Designed UI/UX for new features that will be introduced to the website in the future.

Technical Projects

Football Training Booking Application

ReactJS, Java Spring Boot, PostgreSQL

- Developed a web app using React and Spring Boot that allows customers to book training sessions and coaches to set available times; currently in use by 50 customers and 3 coaches.
- Implemented CRUD functionality with PostgreSQL and Spring Boot alongside a user-friendly interface, working in a team of 3 developers.

Sign Language Interpreter

Python

- Developed a machine learning system to recognize letters and numbers in sign language from static images, applying deep learning models such as LeNet, AlexNet, and ResNet.
- Built a custom PyQt5 GUI to test models with features like image upload and capture, also providing prediction accuracy visualization.

Guess Who?

Java, JavaFX

- Collaborated with a team using GitHub for version control to develop an AI-powered JavaFX game designed to test investigative skills through interactive crime scenes and suspect interrogations.
- Engineered custom GPT prompts to give each suspect distinct personalities and behaviors, ensuring unique and engaging interactions for the player.

Go-Chiro (go-chiro.com)

ReactJS, CSS

- Built a React-based website for a local chiropractic business, attracting over 100 views and actively enhancing the business's online presence.
- Implemented responsive and user-centric design, ensuring compatibility across devices and browsers.
- Collaborated in a team environment, contributing to the development of key features while adhering to project timelines and best practices.

Extracurricular Activities

Google Developer Groups on Campus – Social Event Lead: Lead organizer for an interview workshop and a hackathon with 72 participants.

Web Development and Consulting Club – **Project Manager**: Leading an agile team of 10 to build a client site, including direct client communication for requirements.

Software Engineering Students Association, Developers Society: Attend workshops to enhance software development knowledge and network with others in tech.

Skills

Technical: Java (OOP), Spring Boot, JavaScript, ReactJS, Python, HTML & CSS, Tailwind CSS, C#, MATLAB, GitHub, JavaFX, Figma, Git, Playwright

Soft Skills: Communication, Teamwork, Leadership, Critical Thinking
